Role _____

Projects: _____

1. Purpose

Elixpo is applying to be a mentoring organisation for Google Summer of Code (GSoC) 2027. This document sets out, in public, what the person named above commits to, so that contributors know what they can expect from Elixpo. It applies from signature until the end of the GSoC 2027 programme, or until the person steps down under section 7.

2. Responsibilities

As a mentor, I will:

- give each contributor I mentor about 2–4 hours a week during the programme, with more during the first weeks;
- reply to contributors within 48 hours on weekdays, and review their pull requests promptly;
- hold a regular check-in with each contributor and help them keep a public record of progress;
- act as backup for the ideas listed above, so a contributor is never left without a mentor;
- take part in contributor selection, including speaking with shortlisted applicants, and judge proposals only against the published selection criteria;
- complete midterm and final evaluations honestly and on time;
- help the contributor stay involved with Elixpo after the programme.

As an organisation administrator, I will also:

- prepare and submit Elixpo's organisation application and keep Elixpo's published information accurate;
- follow Google's programme communications and meet every programme deadline, covering for the other administrator when they are unavailable;
- make sure every accepted contributor has a primary and a backup mentor at all times;
- handle escalations and Code of Conduct reports fairly, and hand a report to the other administrator if I am involved in it.

As programme coordinator, I will:

- answer programme questions sent to gsoc@elixpo.com within 48 hours on weekdays, and route technical questions to the right mentor;
- keep the contributor guide, FAQ and programme timeline accurate and consistent;

- organise community sessions such as applicant Q&As and onboarding;
- keep the public weekly progress log during the programme and help with the retrospective afterwards;
- not mentor, review code or evaluate contributors.

3. Availability

I will tell the other organisers in advance about any absence longer than two working days, and arrange cover with my backup before it starts.

4. Conduct

I will follow the Elixpo Code of Conduct, the Google Summer of Code programme rules, and Elixpo's AI policy. Mentoring, reviews and evaluations are done by me personally; I will not hand them to an automated system.

5. Confidentiality

I will keep applicants' and contributors' personal information, proposals under review, selection discussions and evaluations confidential to Elixpo's organisers and mentors. I will not publish them or store them in any public repository.

6. Conflicts of interest

I will disclose any close personal, family, academic or employment relationship with an applicant or contributor, and I will step back from selecting or evaluating that person.

7. Stepping down

If I can no longer meet these commitments, I will tell the organisation administrators as early as possible and hand over my work so no contributor is left without support.

8. Publication

I agree that this signed commitment, without personal contact details, is published at `https://gsoc.elixpo.com/agreements/`.
